Articles found in PubMed, Science Direct, & Wiley databases are primarily scholarly and empirical.

Enter the keywords: your topic & study or studies or stud*

How to tell if your article is an empirical article?
- is the article in a scholarly or professional journal?
- does the abstract mention a study, observation, analysis, # of participants/subjects
- was the data collected via a survey/questionnaire/assessment/measurement/interview?

Empirical articles usually contain these sections:
- introduction
- literature review
- methodology
- results
- discussion
- conclusion
- references
